1. System Preparation and Requirements

HKN Dentaire operates fully offline directly on the clinic computer. All patient records, clinical charts, and financial data remain safely inside the practice. No internet connection is required during daily use.

Hardware and System Checklist

- Operating System: Microsoft Windows 10 or Windows 11 (64 bit)
- Memory: 4 GB RAM minimum (8 GB recommended)
- Prerequisite Software: Python version 3.11 (installer provided on setup media)
- Main Application Package: The standalone clinic ZIP archive

2. Quick Automated Installation Process

Follow these four simple phases to set up the software on the clinic server computer:

PHASE 1 **Install Python 3.11**

1. Open the Python 3.11 installer executable from your setup disk.
2. Look at the bottom of the very first setup window and check the box:

   > **CRITICAL STEP:** Enable the checkbox labeled **Add python.exe to PATH** before clicking install.

3. Click **Install Now** and wait until completion.
4. Click **Close** when the successful installation screen appears.

PHASE 2 **Extract the Software to Drive C**

1. Create a clean directory directly on drive C named: `C:\clinic`
2. Extract all files from the application ZIP package into this folder.
3. Confirm you see the file named `install.bat` inside `C:\clinic`.

PHASE 3 **Run the Automated Installer**

1. Double click on `install.bat` inside your clinic folder.
2. The assistant will verify Python and configure the internal environment.
3. When prompted, provide three basic clinic details:
   - Doctor Full Name (for example: Dr. Benali Amine)
   - Login Account Username (for example: dentiste)
   - Account Password (choose a secure personal password)

4. The script automatically creates an **HKN Dentaire** shortcut on the Windows Desktop.

PHASE 4 **First Time Offline Activation**

1. Double click the **HKN Dentaire** icon on your Desktop.
2. The program window opens. On first launch, it displays the **Licence Inactive** screen.
3. Note the thirty two character code labeled **Installation ID** on screen.
4. Provide this Installation ID to your software distributor.
5. Your distributor sends you your clinic license file (for example: `cabinet_nom.lic`).
6. Click the blue button labeled **Installer la licence**, select the file, and click Open.
7. The application activates immediately and opens the doctor login window.

3. Daily Practice Usage

Opening the Application

Each morning, simply double click the **HKN Dentaire** icon on your Desktop. The system starts instantly in its own clean window without browser toolbars or distractions.

Closing at End of Day

You can close the window at any time. If you wish to stop the background clinic server completely when leaving the clinic, open your clinic folder and double click `scripts\stop.bat`.

Connecting a Reception Desk Computer

If your practice has a reception computer or secondary operatory screen:

1. Ensure both computers connect to the same local clinic router or wireless network. Internet access is not needed.
2. On the main doctor computer, identify its local network address (for example: `192.168.1.15`).
3. On the reception computer, open Google Chrome or Microsoft Edge and navigate to:

   > **Reception URL:** http://192.168.1.15:8000

4. The receptionist logs in with the reception credentials to manage appointments and payments.

4. Backup and Data Protection

Clinic patient records, medical histories, odontograms, and financial ledgers represent vital assets. Protection occurs on two levels:

Backup Type	Schedule and Execution	Location on Computer
Automatic Daily Backup	Occurs automatically every evening at 20:00 while the application is active.	`C:\clinic\data\backups\`
Instant Manual Backup	Click Paramètres in the app menu, scroll to Sauvegarde, and click Sauvegarder maintenant.	`C:\clinic\data\backups\`

> **Weekly Flash Drive Rule:** Keep a dedicated USB storage drive connected to the computer. Once each week, copy the entire `C:\clinic\data\backups` folder to this USB drive and store it safely.

5. Prescription and Document Printing

When printing ordonnances, medical certificates, quotes, or healthcare sheets:

- On your first print command, a settings reminder box appears.
- In the printer dialog, set Margins to **Default**. Custom margins alter letterhead alignment.
- Ensure the option labeled **Background Graphics** is checked. This guarantees that clinic watermarks and table fills print sharply on paper.

6. Common Questions and Troubleshooting

Question or Situation	Resolution Procedure
Installer reports Python is missing	Run the Python installer and confirm you checked the box: Add python.exe to PATH. Then run install.bat again.
Notification says Port 8000 in use	The clinic server is already running in the background. Open your Desktop icon directly, or run scripts\stop.bat first.
Internet connection stops working	The system operates entirely offline. Consultations, odontogram charting, and printing continue without any interruption.
Moving software to a new computer	Install on the new PC following this guide, note the new Installation ID, and request an updated license file from your distributor.
